

*BROCK® AERATION SYSTEMS*

## AXIAL FANS

The BROCK® Aeration System product line offers:

- Economical GUARDIAN® Series Vane Axial Aeration Fans with high airflows at low static pressures.
- Factory-balanced fans tested for vibration and energy usage to provide reliably smooth operation.
- Recommended and optional BROCK® Axial Wrap-Around and Bolted Fan Transitions to optimize airflow into the grain.

The GUARDIAN® Series Vane Axial Fan's **venturi opening** uses innovative curvature design for efficient air performance. A 10-mil PVC coating on **screen guard** provides superior corrosion resistance and attractive appearance.

Dynamically balanced cast aluminum **blade** has advanced air foil design for efficient air handling.

**Air vanes** are a standard feature on all 18-inch (457-mm) diameter and larger fans. The vanes aid efficient airflow at higher static pressures by reducing air turbulence.

**Totally-enclosed, air over (TEAO) motors** are standard for all GUARDIAN® Series Axial Fans. Two-piece bolt-together **motor mount/fan support** provides a solid connection for mounting the fan and aids fan stability during operation.

## ASK ABOUT BROCK'S AXIAL HEATERS

Brock's GUARDIAN® Series Axial Heaters are available in 24-, 26-, and 28-inch (610-, 660-, and 711-mm) diameters to match your grain conditioning needs. Low temperature heaters are also available.

## CENTRIFUGAL IN-LINE FANS

The BROCK® Aeration System product line offers:

- GUARDIAN® Series Centrifugal In-Line Aeration Fans with low airflows at high static pressures — excellent for use with smaller grain bins holding small grains (wheat, rapeseed, barley, etc.)
- Factory-balanced fans tested for vibration and energy usage to provide reliably smooth operation.
- Recommended BROCK® Axial Wrap-Around Fan Transitions to optimize airflow into the grain.

All Brock GUARDIAN® Series Centrifugal In-Line Fans feature a reinforced, 12-gauge, galvanized **steel housing** for durability and long fan life.

Dynamically balanced aluminum **centrifugal wheel** features advanced air foil blade design to efficiently handle low airflows at medium to high static pressures.

**Totally-enclosed, air over (TEAO) motors** are standard for all Brock GUARDIAN® Series Centrifugal In-Line Fans. Two-piece bolt-together **motor mount/fan support** provides a solid connection for mounting the fan and aids fan stability during operation. **Air straightening vanes** aid efficient air flow by reducing air turbulence.

Fan's **air inlet orifice** uses an innovative design to promote better airflow into the centrifugal wheel to enhance fan performance. The unique **baffle** design helps to direct air into the centrifugal wheel to encourage smooth, efficient fan operation. A 10-mil PVC coating on **screen guard** provides an attractive appearance and superior corrosion resistance.

### Fan Selection Made Easy

A key component of the BROCK® Aeration System is the AIR SOLVER® Fan Selection Software. Your Brock dealer simply enters your storage system's aeration requirements and the software helps choose the aeration fan type and size appropriate for meeting your aeration needs.

## LOW-SPEED CENTRIFUGAL FANS

The BROCK® Aeration System product line offers:

- GUARDIAN® Series Low-Speed Centrifugal Aeration Fans with high airflows at medium static pressures for larger storage bins.
- Factory-balanced fans tested for vibration and energy usage to provide reliably smooth operation.
- Recommended and optional BROCK® Centrifugal Wrap-Around and 44- and 67-inch (1118- and 1702-mm) Wide Bolted Fan Transitions to optimize airflow into the grain.

All Brock GUARDIAN® Series centrifugal fans have a reinforced, 12-gauge, galvanized **steel housing** for durability and long fan life. Totally-enclosed, fan-cooled (TEFC) **motors** are standard.

When GUARDIAN® Series Centrifugal Fans require a foot-mount, Brock's high-strength, adjustable foot structure with dampening pad assists with leveling the unit and provides the fan support needed for smooth operation.

As a part of Brock's high standard of quality and reliability, all GUARDIAN® Series Centrifugal Fans are factory-tested for fan balance to minimize performance-robbing vibration.

## A VARIETY OF WAYS TO SUPPORT GUARDIAN® SERIES CENTRIFUGAL FANS

The BROCK® Aeration System offers a variety of approved mounting options for installing GUARDIAN® Series Centrifugal Fans and transitions to BROCK®

Grain Storage Bins. Each has been designed and tested to ensure proper fit and smooth performance. See your authorized Brock dealer for the details.

Cable Suspension Mount

Concrete Foundation Mount

Knee-Brace Mount

## HIGH-SPEED CENTRIFUGAL FANS

- The BROCK® Aeration System product line offers:
- GUARDIAN® Series High-Speed Centrifugal Aeration Fans with low airflows at high static pressures.
  - Factory-balanced fans tested for vibration and energy usage to provide reliably smooth operation.
  - Recommended BROCK® 44-inch (1118-mm) Wide Bolted Fan Transitions to optimize airflow into the grain.

The GUARDIAN® Series High-Speed Centrifugal Fan's **air inlet orifice** uses an innovative design to promote better airflow into the centrifugal wheel to enhance fan performance. A 10-mil PVC coating on the **screen guard** provides superior corrosion resistance and attractive appearance.

**Diverter** and **baffle** help to redirect air spilling from the centrifugal wheel to encourage smooth, efficient fan operation.

Dynamically balanced, seam-welded steel **centrifugal wheel** features advanced air foil blade design to help maximize air performance.

### Ask About Brock's Centrifugal Heaters

Brock's GUARDIAN® Series Centrifugal Downstream Heaters are available to match centrifugal fan models and offer capacities of up to 5,000,000 BTUs. This gives you the flexibility required to meet your grain conditioning needs for in-bin drying.

## LOW-SPEED CENTRIFUGAL PTO FANS

- The Brock GUARDIAN® Series Low-Speed Centrifugal PTO Fan is designed for direct engine-drive use at 1750 RPM. Use a flexible coupling to link this fan to the power take-off of irrigation or other utility engines. Fan features:
- Models from 10- to 50-horsepower.
  - Heavy-duty two-inch (51-mm) diameter high-tensile steel drive shaft.
  - Industrial grade double pillow-block bearings.

# SPECIFIC CONTROLS, STANDARD BOX

A standardized control box is used with all Brock GUARDIAN® Series fans. Brock's controls are specifically matched to each fan unit and have adjustable overload protection.

Made of durable polycarbonate with a hinged translucent cover, the **control housing** is designed to be weather-, dust-, and rodent-proof.

**Standard components** are used for safe and reliable motor control.

Airflow ratings have been determined by an independent fan testing facility in accordance with AMCA Standard 210.

# AERATION FAN TRANSITIONS

Wrap-around transitions for axial, low-speed centrifugal and in-line centrifugal fans

Bolted transitions for low- and high-speed centrifugal fans

Centrifugal fan back-draft damper cutaway view with damper closed

Patent Pending  
Axial fan butterfly back-draft damper cutaway view with damper open

Sidewall/Floor Support helps minimize airflow obstructions

## BROCK® FAN TRANSITIONS HELP OPTIMIZE GRAIN AIRFLOWS

The BROCK® Aeration System's selection of components includes BROCK® Fan Transitions and related options for excellent aeration performance with reliably smooth operation. Brock's family of fan transitions offers:

- A selection of durable, galvanized steel wrap-around and bolted transitions designed to optimize airflow into the grain while minimizing pressure losses.
- Exclusive back-draft damper options (patents pending) that automatically prevent under-floor pressure from flowing air back through a fan that is not running. Dampers are recommended for multiple fan installations.
- Extensions for supporting bin floors in full-floor bins are standard and help to minimize airflow obstructions into the aeration plenum.
